

PROVEN EFFECTIVENESS

Growing economy and increased competition make companies focus on the quality of products, customer satisfaction and customer loyalty. Studies show that these are extremely important factors that can take to position a company as a leader in a market. Measuring customer feedback for product and surveying customer satisfaction provides valuable insights for a company and shows customers that their opinions matter and they play the important role in the process.

The purpose of the survey on the BiggerSize dietary supplement was to obtain reliable and credible information and customer opinions about the product.

BiggerSize is a dietary supplement designed for men to change the size and hardness of the penis when erect, as well as increase sexual performance and achieve more intense sensations.

The survey on the BiggerSize dietary supplement was conducted on a sample size of 70 respondents who tested the product, provided by the manufacturer, from April 1 to 30, 2018.

Thesis

BiggerSize dietary supplement is an effective remedy to increase potency, strong orgasm and enlarge and thicken the penis.

Research objective

The purpose of the survey is to determine whether, in the opinion of respondents, the BiggerSize dietary supplement achieves the expected results indicated by the manufacturer i.e.:

- Penis enlargement and thickening
- Strong erection
- Preventing premature ejaculation
- Delaying orgasm

Survey tool

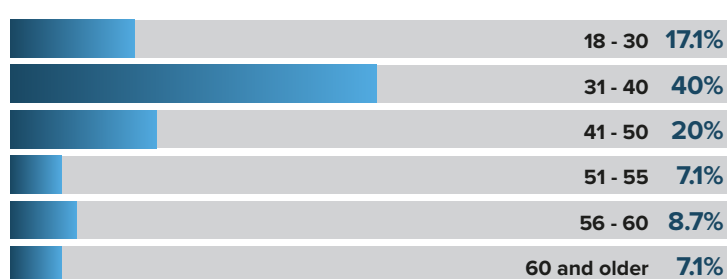

The survey was conducted anonymously. A questionnaire was used as a research tool. The questionnaire was posted online on a website www.ankietka.pl. The survey link was sent with a prior consent to the respondents testing the BiggerSize dietary supplement. The questionnaire contained closed-ended questions (a limited set of possible answers)

Characteristics of the survey population

The survey was conducted on a sample size of 70 respondents who tested the BiggerSize dietary supplement.

The dietary supplement was most often used by men aged 31 - 40 — 40%.The second largest group were men aged 41-50 - 20%.

People aged under 30 years accounted for 17% of the respondents and people over 60 years accounted for 7%.
